## ■ Your Website Will Be

### ■ Cost Effective

There is only the initial investment for your website. The on-going cost for maintenance will be low compared to the expenses you have for your business such as rent and employees. The cost for your website is a mere fraction of the overheads in your business and the benefits in return are immeasurable.

### ■ 24/7/365

Your website and social media will be acting as your 24/7/365 salesperson. Your website will promote your products & services even after hours. On top of that, your customers will even be able to purchase products via your website anywhere & anytime. Imagine going to a shop after opening hours only to find out that it was shut. Never again.

### ■ A Click Away

Instead of driving out to look for different stores, everything is a click away. With the tremendous increase of mobile usage, you offer your customers the convenience of buying your product while lying on the couch. Even better if your competitors don't operate through a website, it will allow you to stay ahead of them and if they do, then you have no choice but to make your website better than your competition.

### ■ Credibility

By having website done professionally, you allow your customers to experience your brand before they make a decision. With the help of testimonials and reviews, your customers will trust your product to be the right choice. People tend to trust a business when countless of other people have done business with it.

### ■ Sales

Finally, your sales will dramatically increase as customers are able to purchase around the clock with hardly any limitations unless you run out of stock and that is a great problem to have. By making sales, more customers will be attracted to your business which will result in more sales creating a huge snowball effect that will propel your business to the next level.

## ■ How to Choose Your Package

At Webcom Technologies, we offer 3 different packages that are tailored to suit the requirements for your new website.

### ■ Standard Package

This package is suitable for all your most basic needs. If you need a standard 7-10 page website with stunning & modern design to promote your products & services without an online store or any other complex functionalities then this should be your package of choice. Your website will also be mobile responsive as it is a necessity in this era.
